

Covid19 situation report for WHO Africa

07/04/2020

COVID-19 Epidemic Response Unit, University of Edinburgh

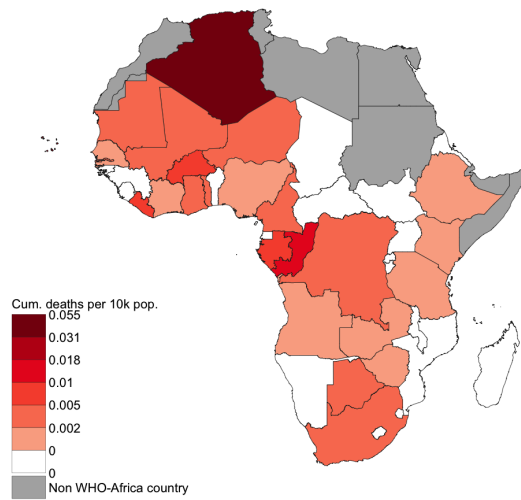

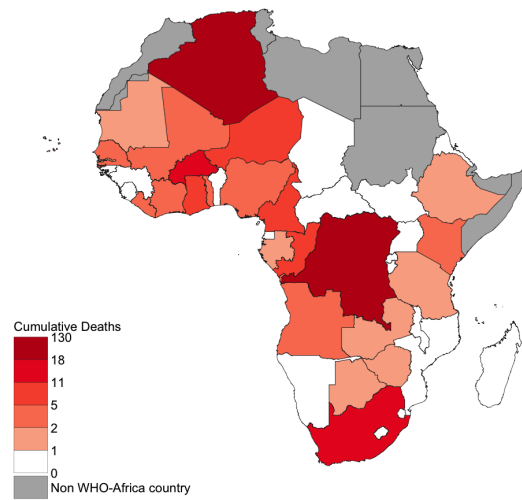

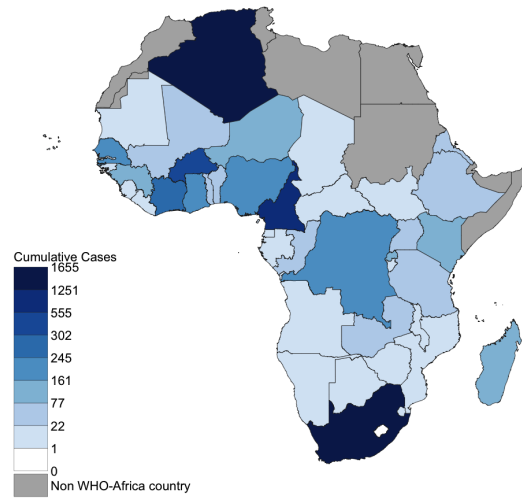

We compare the size and rate of increase of the COVID-19 epidemic across the countries included in WHO Africa Region.

WHO Africa situation overview

The maps above summarise the in-country situations:

- Top-left: cumulated reported cases.
- Top-right: cumulated reported cases per 10,000 population on a log10 scale.
- Middle-left: cumulated reported deaths.
- Middle-right: cumulated reported deaths per 10,000 population on a log10 scale.
- Bottom-left: Overview of doubling time of cumulative incidence. Doubling times are calculated over a 7 day period up to 06/04/2020.
- Bottom-right: Overview of doubling time of cumulative deaths per 10,000 population. Doubling times are calculated over a 7 day period up to 06/04/2020.

APPENDIX

Data

Sources and access

- Case counts for countries in WHO African region from WHO Coronavirus disease (COVID-2019) situation reports <https://www.who.int/emergencies/diseases/novel-coronavirus-2019/situation-reports> (accessed 2400 06/04/2020).
- Death counts for countries in WHO African region from WHO Coronavirus disease (COVID-2019) situation reports <https://www.who.int/emergencies/diseases/novel-coronavirus-2019/situation-reports> (accessed 2400 06/04/2020).
- Population counts from the World Bank (2018) <https://data.worldbank.org/indicator/SP.POP.TOTL?locations=ZG> (accessed 0900 30/03/2020).

Doubling time calculations

Calculated over prior 7 days using method described by *E. Vynnycky & R. White (2010) An Introduction to Infectious Disease Modelling*, page 74.

Confidence intervals calculated using bootstrapping of a simulated dataset with Poisson error structure, using method published here: <https://doi.org/10.1101/2020.02.05.20020750>.

Caveats

- Case count data are affected by any changes in testing strategy or testing effort over time and/or any variation in testing strategy or testing effort between regions.
- Case count data are likely a substantial under-representation of the true number of COVID-19 infections.
- Death data are considered more reliable but may lag behind case data by as much as 3 weeks.

Extended data tables

Cumulative incidence

Country	Cum. Incidence	ci.low	ci.upp
South Africa	1655	1573	1717
Algeria	1251	1215	1295
